

## **CaseAce Products Introduces the Ultimate Monitor Harness**

**New GearGrip™-CRT monitor harness - perfect for LAN gamers.**

Escondido, CA.—May 23, 2001—Today CaseAce Products ([www.geargrip.com](http://www.geargrip.com)) formally introduced the new GearGrip™-CRT monitor-carrying harness. This completely new class of computer accessory is perfect for anyone who needs to transport a computer monitor short distances. The GearGrip™-CRT harness is designed to make it easy to carry a monitor in one hand and when accompanied by the GearGrip™-Pro computer harness, allows for the entire transport of a desktop computer system by one person.

The GearGrip™-CRT is designed with the same high quality that the GearGrip™ name is known for. The product is flexible enough to work with monitors up to 21" in size. It includes many great features such as a soft-grip handle for comfortable carrying and a CableGrip™ cable manager to handle all of those cables that would normally be tripped over when moving a monitor the traditional way.

This type of product is long over due for those people who need to transport computer systems regularly. Computer LAN gamers are the largest category of user for this type of product as they are frequently carrying computer systems around town to attend computer gaming events. In addition, students, technicians and high-tech professionals will find this product a welcome relief from the very awkward task of carrying a computer monitor.

### **Pricing and Availability**

The GearGrip™-CRT is available direct ([www.geargrip.com](http://www.geargrip.com)) or through a number of national and international resellers. The harness has a retail list price of \$26.95 (US).
